## **PROJET FINALE**

## But:

- 1) Analyser le jeu de données et faire ressortir les éléments marquant de votre analyse (des graphiques, des corrélations etc).
- 2) Après analyse et éventuelles modifications de la base de données (suppression sur justification des variables « inutiles » ou individus « inutiles », suppression des doublons, modifications de variables, création de variables ...)
- 3) Faire une ACP et interpréter.
- 4) Classification et **interprétation** de la classification (je vous conseille une classification mixte et aussi de visualiser vos clusters sur les plans factoriels de l'ACP)

## Conseils pour le pré traitement des données :

- Supprimer les joueurs en doublon
- Ne garder que les joueurs ayant significativement joué sur la saison
- Re travaillé le poste des joueurs pour n'avoir que 4 modalités :
  FW = attaquant, MF=Milieu de terrain, GK= goal, DF=défenseurs
- Mettre le nom des joueurs en row.names
